

DENTURES

Another Solution to Missing Teeth

If you've lost all of your teeth, either from periodontal disease, tooth decay or injury, complete dentures can replace your missing teeth and improve your smile. Replacing missing teeth will benefit your appearance, and your health. Without support from the denture, facial muscles sag, making a person look older.

People often turn to dentures as a solution for missing teeth. You'll be able to eat and speak—things that people often take for granted until their natural teeth are lost.

Dental dentures are inexpensive, attractive, and easy to acquire. One of our dentists at Olympia Fields Dental Associates can tell you whether or not you need partial dentures, or a full set of dentures. People missing only some teeth need a partial denture, but if you're missing all your teeth, you need a full set of dental dentures.

Improve your health and brighten your smile. First impressions are lasting impressions and having an attractive smile can make you look and feel younger. Call our office today at 708.481.1818 to set up a consultation with one of our dentists.
