

INVISALIGN®

The Clear Alternative to Braces

If you have crooked or over spaced teeth, you may want to consider Invisalign® — the clear alternative to braces. New Invisalign® technology makes using conventional braces for many conditions, such as overbites, underbites, and crooked teeth, practically obsolete.

Invisalign® clear braces can transform your current smile into a beautiful smile, in a very short time. Invisalign® braces are custom made for your teeth and are clear, effective, removable, and comfortable.

Invisalign® is very effective for minor crowding and spacing. They don't involve metal or brackets and won't irritate your gums like traditional braces. Invisalign® also allows you to brush and floss easily during treatment because they are removable.

As a preferred dental provider for Invisalign®, Olympia Fields Dental Associates will give you an examination to determine if Invisalign® treatment is right for you.

First impressions are lasting impressions and having an attractive smile can boost your confidence. Call our office today at 708.481.1818 to set up a consultation with one of our dentists.
